

INSTALLAZIONE DVWA SU KALI

A screenshot of a Kali Linux terminal window. The title bar shows various application icons and system status indicators like time (10:04) and battery level. The terminal has three tabs open, all titled "root@kali: /etc/php/8.2/apache2". The command history shows the user navigating to "/var/www/html", attempting to clone the DVWA repository from GitHub (which fails because the directory exists), trying to set permissions with "chmod <89>R 777 DVWA/" (which fails due to an invalid mode), and finally creating the directory with "mkdir -R 777 DVWA/". Subsequent commands show the user moving into the "DVWA/config" directory, copying "config.inc.php.dist" to "config.inc.php", editing it with "nano config.inc.php", and returning to the "/etc/php/8.2/apache2" directory. A large, faint watermark of a dragon is visible in the background of the terminal.

DVWA SU BURPSUITE:
